

Building a US National Park Service Online Base Map

Mamata Akella

NPMMap

Who we are

- Build, maintain, and support a JavaScript web mapping library (NPMMap)
- Design and develop project specific web maps
- GIS Server and data management

Team

David Warren 	Mamata Akella 	Nate Irwin 
Data Manager	Cartographer	Developer

Online Basemaps

What we currently use

- Current Basemaps
 - Bing, Esri, Google, MapBox

NPS Styled Online Basemap

Why we're building it

- An online basemap that has the “look and feel” of the NPS brand
 - Transfer NPS printed park map cartography to the web
 - Build a basemap that can be used by visitors and for NPS specific web applications
 - At large scales, display detailed park data

Data

Data and the NPS

- Data + National Park Service
 - Data store, some internal data collection projects underway (trails, poi's)
- Data + Harpers Ferry Center
 - Printed map products, starting to move to a GIS system
- Data + Individual Parks
 - Data collection not standardized, no staff available to collect data
- Base data
 - Looking into openly available sources to use in our products

Data

What we're using

Data Source			
	National Park Service		OpenStreetMap
	Natural Earth		US Census Bureau
	NASA		NOAA
	USGS		Under consideration

	Zoom level										
Map Features	4	5	6	7	8	9	10	11	12	13	14
National Park Units											
Boundaries											
State/Country Labels											
City Labels											
Urban Areas											
Hydrography											
Hydro Labels											
Coastline											
Roads											
Shields/Road Labels											
Trails											
Points of Interest											
Shaded Relief											

Technology

How we're building our map

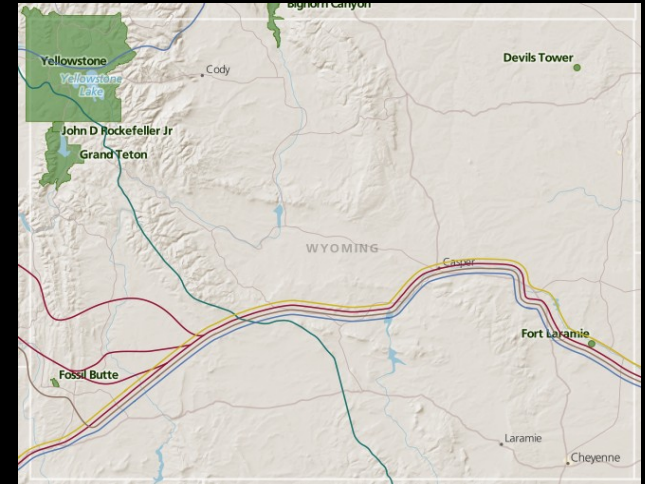

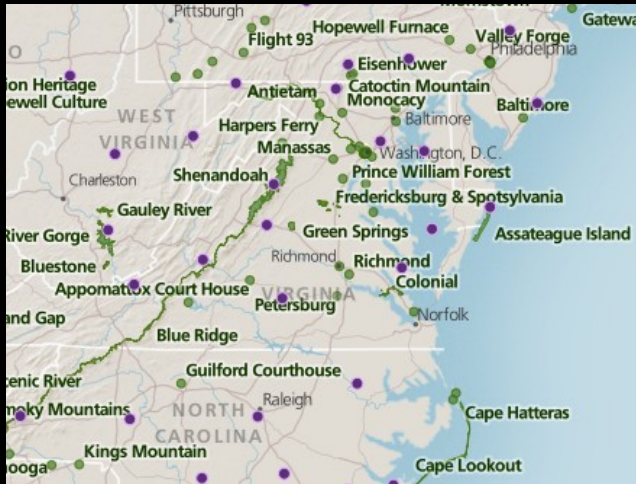

- Data Management/Processing
 - osm2pgsql > PostGIS (looking into Imposm)
 - High Roads
 - SQLite, Shapefile
 - QGIS
- Design
 - TileMill (basemap design)
 - Dymo (labeling at smaller scales)
 - Inkscape (marker symbol design)
 - ArcGIS (vignettes)
 - Natural Scene Designer/Adobe Photoshop (relief)

Technology

How we're serving our map

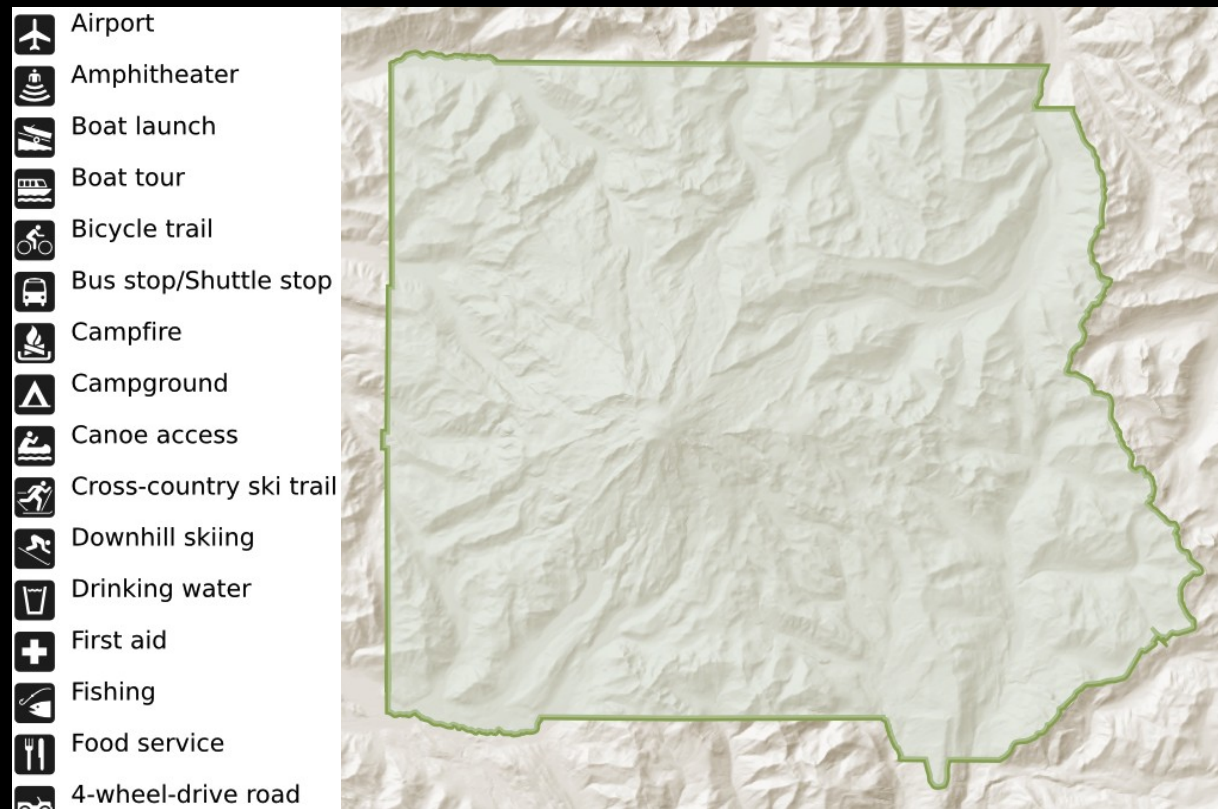

- Serving
 - TileStream and our NPMMap JavaScript library
- Overlay patterns

Future Work

Data collection

- [NPS OSM Editor](#)
 - Work with Park Service employees, volunteers, and OSM data contributors
 - NPS specific tags/review process

Future Work

Multi-scale cartography

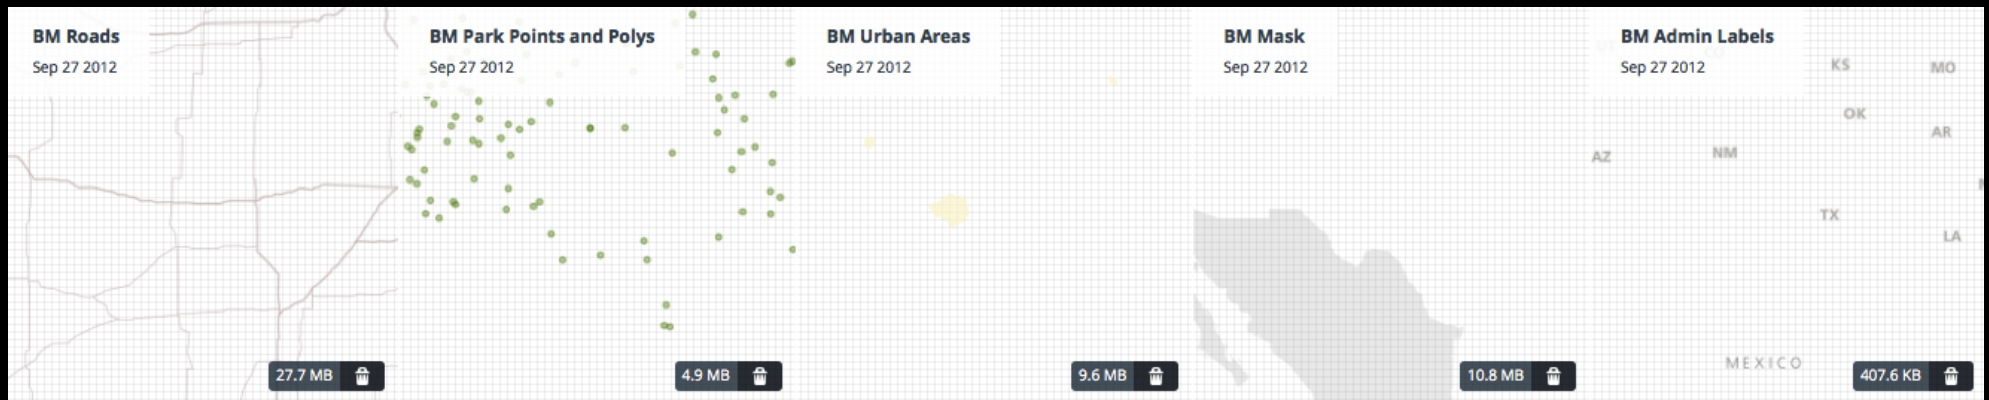

- More than just the area of a feature
- Significance to the National Park
- Add hierarchy for POI's, trails
- Introduce features (and labels) through scale using an “importance” attribute

Resources

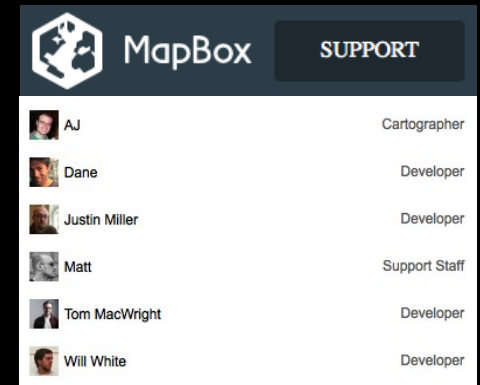

NPMap

- NPMap Website
 - www.nps.gov/npmap
- Follow us on Twitter
 - [@npmap](https://twitter.com/npmap)
- Use our tiles
 - tiles.mapbox.com/nps

Appreciation

Thanks for your help!

	AJ	Cartographer
	Dane	Developer
	Justin Miller	Developer
	Matt	Support Staff
	Tom MacWright	Developer
	Will White	Developer

Questions?

Thank you!
